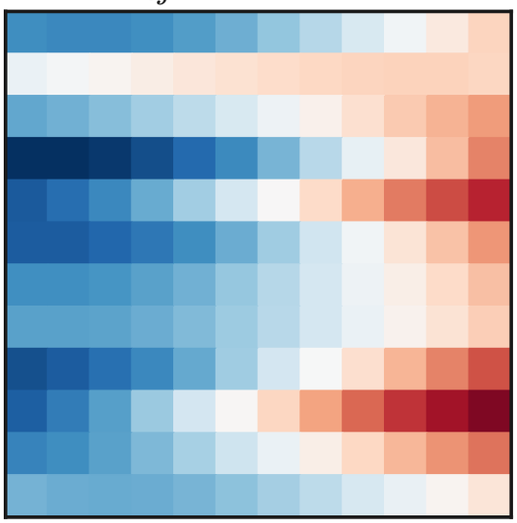
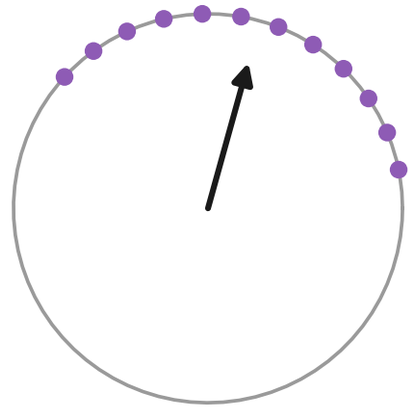
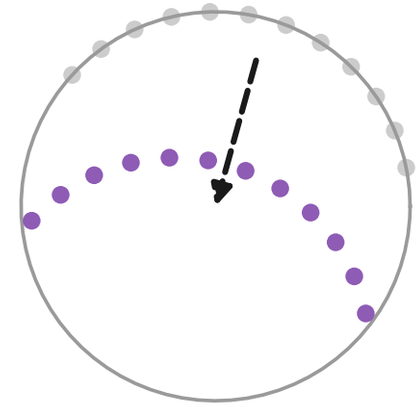
$A^{f}_{ij} = \mathrm{Re}[w_i\, \zeta_j]$



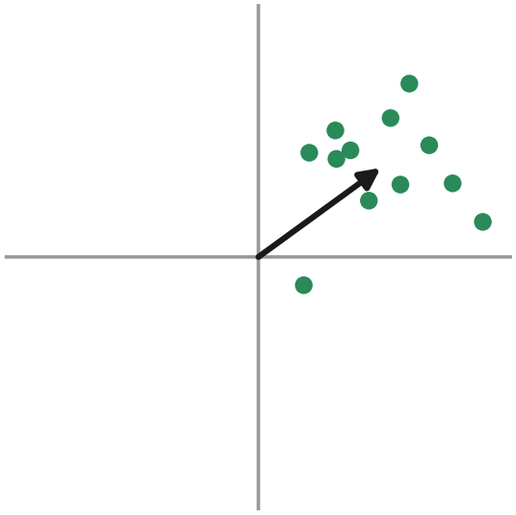
common position
center of mass $\tilde{\zeta}$



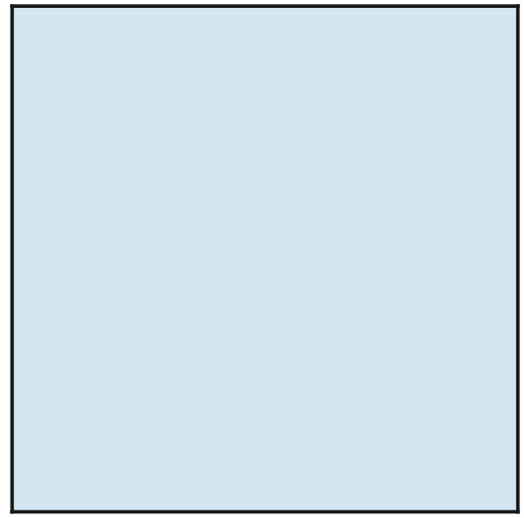
specific position
$\mathring{\zeta}_j = \zeta_j - \tilde{\zeta}$



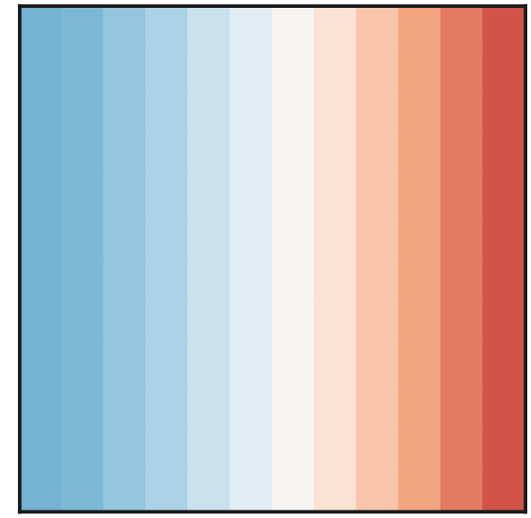
common content
center of mass $\tilde{w}$



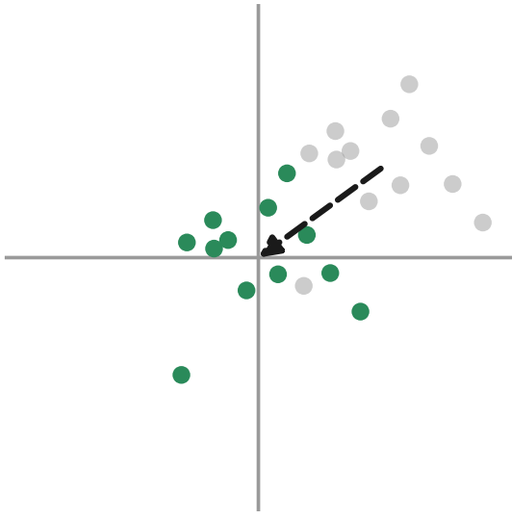
constant
$\mu = \mathrm{Re}[\tilde{w}\, \tilde{\zeta}]$



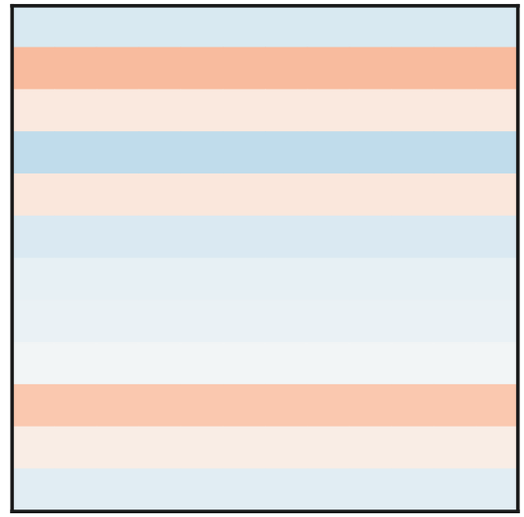
positional
$p_j = \mathrm{Re}[\tilde{w}\, \mathring{\zeta}_j]$

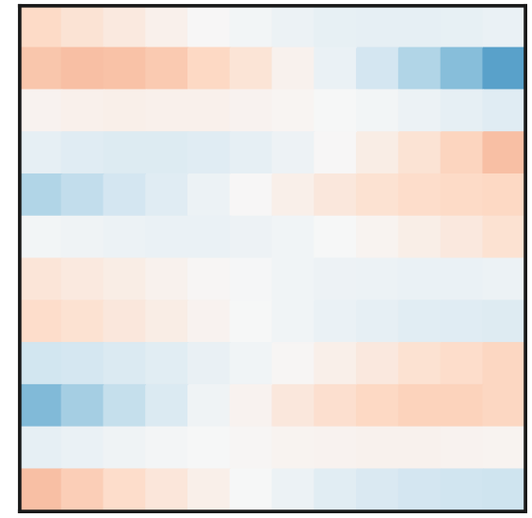


specific content
$\mathring{w}_i = w_i - \tilde{w}$



content
$c_i = \mathrm{Re}[\mathring{w}_i\, \tilde{\zeta}]$





interaction
$\epsilon_{ij} = \mathrm{Re}[\mathring{w}_i\, \mathring{\zeta}_j]$
