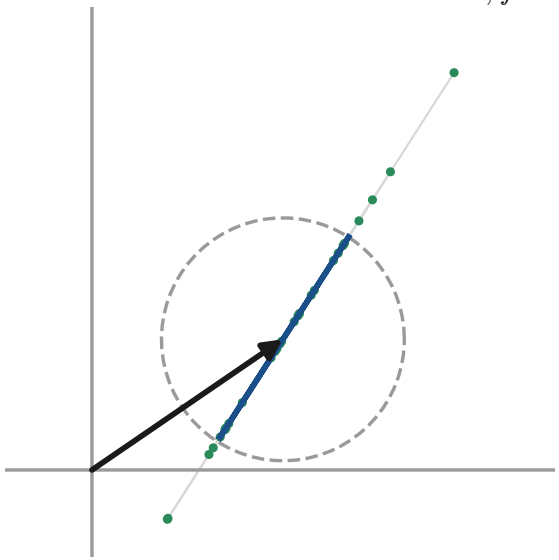
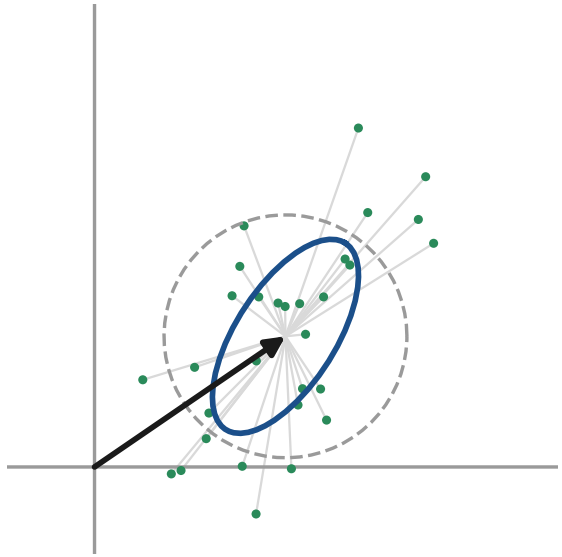
(a) on a line: $|s_w^f| = \sigma_{w,f}^2$



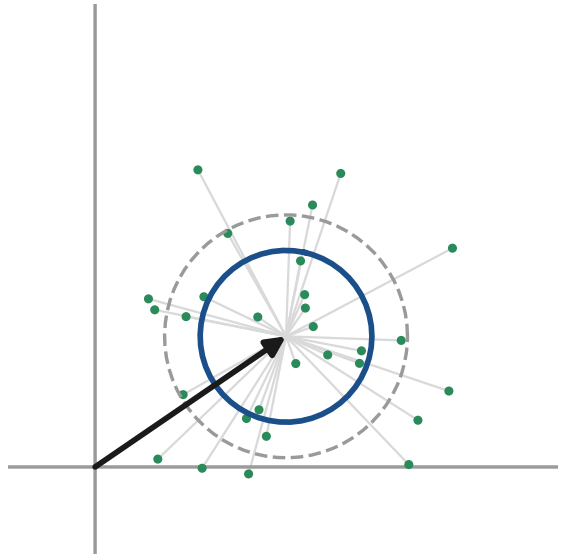
$|\tilde{w}^f|^2 = 0.64,\ \sigma_{w,f}^2 = 0.18,\ |s_w^f| = 0.18$

(b) elongated



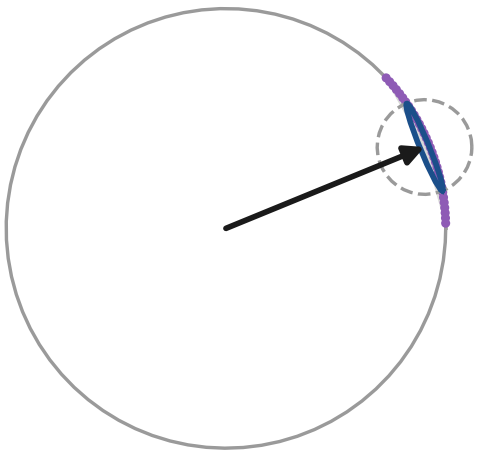
$|\tilde{w}^f|^2 = 0.64,\ \sigma_{w,f}^2 = 0.18,\ |s_w^f| = 0.12$

(c) isotropic: $s_w^f = 0$



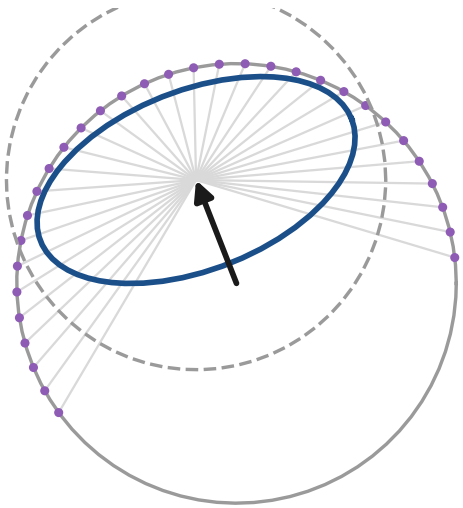
$|\tilde{w}^f|^2 = 0.64,\ \sigma_{w,f}^2 = 0.18,\ |s_w^f| = 0.00$

(d) slow plane, 0.12 turns



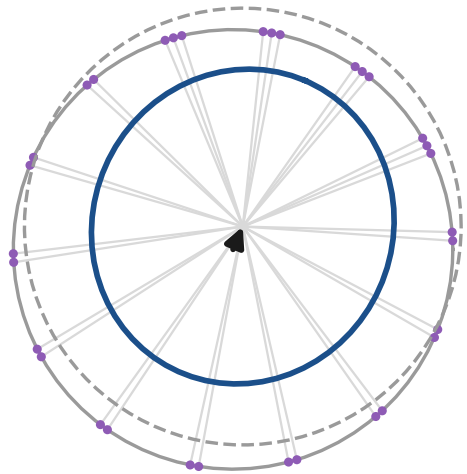
$|\tilde{\zeta}^f|^2 = 0.95,\ \sigma_{\zeta,f}^2 = 0.05,\ |s_\zeta^f| = 0.05$

(e) intermediate plane, 0.6 turns



$|\tilde{\zeta}^f|^2 = 0.25,\ \sigma_{\zeta,f}^2 = 0.75,\ |s_\zeta^f| = 0.41$

(f) fast plane, 2.3 turns



$|\tilde{\zeta}^f|^2 = 0.01,\ \sigma_{\zeta,f}^2 = 0.99,\ |s_\zeta^f| = 0.06$
